Williams' Single Early Tulips

See Colored Illustration on Front Cover.

October and November are the best months for planting, and to grow them to perfection the bulbs should be planted about five inches apart and three to five inches deep. Generally speaking, the single-flowering varieties are by far the most brilliant and showy for outdoor planting. Tulips grow very well in pots with from three to twelve bulbs in each pot or bowl.

The letters A, B, C, etc., following the varieties indicate their earliness of bloom—the A's flower together and are the earliest; B's follow before the A's are out of bloom; etc. The height is indicated in inches to aid in arranging the flower beds.

Giant Darwin Tulips

Darwin Tulips are becoming more popular each year, and should be in every flower garden. They grow two to three feet high, and produce immense flowers on tall, sturdy stems. The named varieties comprise a wonderful selection of brilliant and unique colors, which makes them very attractive. Darwins are called late-flowering Tulips, as they bloom in May after the Single Early Tulips have finished flowering. To aid in making selections of varieties for continuity of bloom, we have indicated their relative time of flowering alphabetically, also give the height in inches each variety attains.

Spring-Flowering Crocus

Crocuses are amongst the very earliest bulbs to bloom in spring, and the great variety of colors make them very attractive if planted in masses of white, blue, yellow, purple, and striped. They make a charming display as harbingers of spring, as they usually come into bloom before the end of winter. As undergrowth among Tulips, Hyacinths, Daffodils, etc., they are very effective, the flowers being over when the other bulbs begin blooming, thus lengthening the floral display, and then the Crocus foliage forms a beautiful grass-like setting for the later flowering bulbs. Crocus are also easily flowered in the house in winter in pots of soil or shallow bowls of Williams' Prepared Fibre.

Exhibition Hyacinths

This is doubtless one of the most useful and popular of hardy bulbs, and is a universal favorite. They are not only grown for forcing into flower during the dull, cheerless months of winter and early spring, but they are equally desirable for planting in beds or in the garden border. The exhibition size are the mammoth bulbs, and are the most desirable size for growing in glasses of water in the house or outdoor planting.

Exhibition Hyacinths.

Miniature or Dutch Roman Hyacinths

A well grown pan of Miniature Hyacinths, with their slender spikes full of flower bells, is a dainty and beautiful sight. They make a better growth in Fibre than any other class of Hyacinths, and their cost is so low that anyone can afford to grow them. In the entire group of Hyacinths there is hardly anything more fascinating than a well grown pan of Miniatures. They are also suitable for bedding out. Being smaller, the bulbs should be planted close together, about 4 inches each way and 5 inches deep (to bottom of bulb). Price, 70c per doz.; \$5.00 per 100; \$35.00 per 1000.

Narcissus and Chinese Lilies

FOR INDOOR CULTURE

White Polyanthus Narcissus

PAPER-WHITE GRANDIFLORA. Are more largely used for early forcing for cut-flowers than any other kind of bulbs. They produce pure white flowers that are very fragrant. Paper-Whites can be grown successfully in pots of soil, pebbles, or Williams' Prepared Bulb Fibre; the latter can be used in any bowl or glass receptacle, as shown in illustration. We supply only mammoth bulbs grown especially for us in France. See engraving. 5c each; 60c per doz.; \$4.50 per 100.

SOLEIL D'OR. Golden yellow, sometimes called the Yellow Paper-White. Like the preceding, it is a great favorite with amateurs and gardeners for forcing. \$1.25 per doz.; \$9.00 per 100.

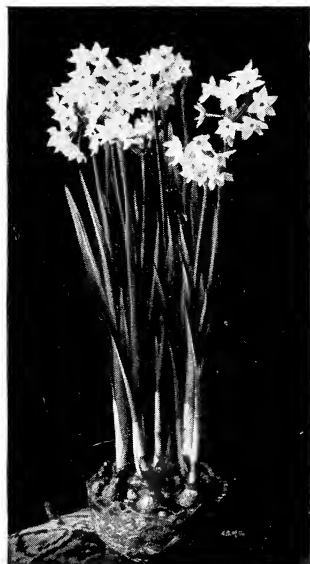

Chinese Sacred Lilies or Joss Flower

Chinese Lilies are only suitable for house culture. They grow well potted in light rich soil in the ordinary manner. The most popular way of growing them is in bowls of sand or pebbles. The flowers, which are borne in clusters on tall scapes, are white with a golden yellow center and deliciously fragrant. The bulbs will bloom in from six to eight weeks' time after planting. With a few bulbs started at intervals a succession of flowers may be had throughout the winter. 25c each; \$2.50 per doz.

All the bulbs I had from you last year were very satisfactory, especially the Rainbow Hyacinths; some of these bulbs had flowers ten to twelve inches in length. The Darwin Tulips also proved a great success and the assortment of colors was without a doubt the most beautiful we have ever had.

NARCISSI Or Daffodils

For every Narcissus bulb planted there are one hundred Tulips or Hyacinths. That this is a great mistake, anyone really familiar with their great merits must admit. They lack the brilliancy of color of the Tulips, but greatly surpass them in variety, delicacy and gracefulness of form, and one never becomes tired of their soft, beautiful colors. The great point

in their favor is that they are permanent additions to the garden.

Narcissi grow wonderfully well in our own state of Virginia where the soil and climate are especially adapted to them. They are in reality an everlasting bulb as they bloom year after year in profusion besides increasing in quantity.

This is not true of Hyacinths and Tulips, which, unless grown under the most favorable conditions, must be planted every year to have blooms each season.

Lily-of-the-Valley

The Lily-of-the-Valley is essentially a shade-loving plant. Beds should be given a northern or northwestern exposure if possible, and the most desirable soil is a rich, sandy loam. In planting, the crowns should be set about three inches apart and about two inches below the surface. A dressing of well-rotted manure and leaf mold in the autumn after the leaves have died down will insure more and finer flowers in the spring.

EXTRA SINGLE CROWNS or "PIPS." The finest grade of crowns for winter flowering. They will bear 12 to 16 large bells on strong stalks, with foliage, even when forced for extra early; the pips average large, plump and regular, with extra long roots. Crowns, 80c per doz.; \$1.50 per 25; \$5.50 per 100.

FORTIN'S GIANT. This is the largest variety yet produced; it is only adapted for open ground planting and may not show much superiority the first spring after planting, but by the second season, or when it gets well established, it produces wonderfully luxuriant foliage and immense spikes of purest white bells twice the size of any other sort. Crowns, 80c per doz.; \$1.50 per 25; \$6.00 per 100.

Lilium Candidum (Madonna or An-unciation Lily)

This is one of the oldest, loveliest and best known Lilies. Can only be planted in fall. Ours is the thick-petaled type, imported by us from Northern France. The flowers, of which there are three to twenty on each stem, are snow-white, with heavy yellow stamens, and of the most delightful fragrance. It is hardy and will thrive in any ordinary soil, preferring plenty of light and air. Blooms in the open ground about June 20th. **MAMMOTH SIZE.** 35c each; \$3.50 per doz.

SPECIAL DIRECTIONS FOR PLANTING AND CARING FOR ROSES

Open a good space in the soil and spread out roots; never cramp them into a small hole. Do not let manure come in contact with roots, but place it underneath and a layer of soil on top. If the rose is a bush plant, set it so deep that only branches are visible above the ground and never the main stem, but too deep is as bad as too shallow; 2 to 4 inches of the lower branches may be under the surface, but no more.

MAMAN COCHET. This is the famous Pink Cochet. Light pink shaded with salmon-yellow, outer petals splashed with bright rose; extremely large and full.

MRS. AARON WARD. Coppery-orange in the open bud, golden-orange when partly developed, pinkish-fawn of lovely shade when fully open, when it looks like a full, fluffy silk rosette. Color effect of the whole flower is Indian-yellow. No wonder everybody who sees it falls in love with it.

WHITE MAMAN COCHET. A splendid Rose; has all the good qualities of Pink Maman Cochet, but is pure snow-white, with outside petals tipped pink.

ALEXANDER HILL GRAY. Deep lemon-yellow, similar in color to Marechal Niel, more intense as the bloom expands.

JONKHEER J. L. MOCK. The blooms are of largest size, highly perfumed. Color clear imperial pink. Awarded two gold medals.

COLUMBIA. It is a big Rose, the open flower measuring six inches across. The color is a true pink, about the shade of a perfect Sawyer, deepening as it opens to glowing pink. A peculiarity of the variety is that the shades all become more intense until the full maturity of the open flower is reached and this color is enduring; a great Rose.

PRINCE CAMILLE DE ROHAN. Deep velvety crimson-maroon, full and of good form and perhaps the best of all the hardy dark Roses.

LA FRANCE. The Queen of all the Roses. Beautiful bright silvery-pink with pale lilac shading.

GRUSS AN TEPLITZ. Bright crimson, white, fiery red center; cup-shaped; semi-double; flowers in clusters; so free in bloom as to present a blaze of scarlet.

WHITE BOUGERE. An elegant pure white Rose.

Price, \$1.00 each; 5 for \$4.00. Complete Collection of ten for \$7.50.

IN THE SOUTH WE RECOMMEND PLANTING ROSES IN THE FALL.

Williams' Giant Waved Spencer Sweet Peas

FOR AUTUMN SOWING

Any Three 10c Packages for 25c, Postpaid.

CULTURE. Ordinary garden soil is suitable for Sweet Peas. The ground should be well drained to avoid water lying too long and causing it to become sour. Select for a location a place open and airy and which receives the sun all day. Seed should be sown in trenches about 4 inches deep and covered to a depth of 2 inches, still allowing the center of the trench to remain at least 2 inches below the level of the ground, that water may be retained. In case of dry weather, constant watering is necessary to keep the roots cool. When the vines are up about 6 inches high, staking with brush or trellis should be attended to at once. One ounce of seed is sufficient to plant 20 feet of drill.
